

M-Net in Pakistan:

Pakistan's top 16 local and foreign banks use M-Net to process payments for their valued customers. We believe M-Net creates "Perfect Synergy of Modern Banking"

M-Net & BASE24-es:

- M-Net has acquired state of the art BASE24-es switch; this is an open system software solution that provides ATM device driving, transaction authentication, routing and authorization services.
- Now M-Net will be providing a much wider range of functionality to support payment transactions – both the traditional transactions (e.g., debit and credit at the ATM and point of sale or telephone banking) as well as emerging transactions (e.g., mobile commerce and Internet banking).
- M-Net's decision to acquire BASE24-es is in line with its vision to provide top of the line technology to its member banks. BASE24-es is the same switch which is being used by institutions like Barclays, Siam City Bank Public Company Limited (SCIB) & National Australian Bank to name only few. The most renowned user of this switch is Visa international.
- M-Net has ensured that its switch should be engineered for scalability, accommodating growth of the ATM network and transaction volumes at the same time not disrupting any services being offered by its member banks to their customers. BASE24-es embraces three tier architecture and uses open system language, asynchronous messaging and object oriented code design. Therefore, as the transaction volumes grow and business requirements change, switch will be able to manage both at the highest level of efficiency.
- BASE24-es supports all leading ATM models, therefore this will support our member banks to access banking services anytime, anywhere.

Message:

We understand that our growth lies in initiative and team work, and this is the reason why we went forward and invested in the most advance technology i.e BASE24-es. We believe to evolve together with you. Thank you for choosing M-net as your network.
